Semester II

needs to be changed to
Mahindra Univeristy
HS2201 : Design Thinking 2026
Semester IV

AT Ananya T. Age 21 · Online Student · Engineering "I check WhatsApp, then email, then the LMS, then ask a friend — and still miss things. I'm not lazy. The system is just impossible to keep up with." 💡 Platform fragmentation causes student disengagement	PK Prof. Kiran P. Age 38 · Hybrid Lecturer · 12 Years Experience "I feel like I'm teaching two classes at once. The offline students feel ignored when I check Zoom. The online students feel invisible when I turn to the whiteboard." 💡 Hybrid delivery creates impossible dual attention demands	RM Rahul M. Age 19 · Hybrid Student · First Year "In hybrid class, I'm online but my classmate is in the room. He gets to talk to the teacher directly. I type in chat and nobody answers. I just give up asking questions." 💡 Participation inequality drives online student disengagement
SP Sunita P. Age 45 · Offline Teacher · 20 Years Experience "Every semester I think it'll get easier. It doesn't. I now spend Sunday evening just setting up platforms for the coming week. That's not teaching. That's IT support." 💡 Administrative overhead is consuming teaching capacity	DV Deepa V. Age 22 · Online Student · Final Year "When everything went online, I thought it would be easier. Instead I feel more disconnected. I watch lectures on mute while my laptop heats up. There's nobody to ask when I'm stuck." 💡 Online learning lacks the social scaffolding of in-person education	VN Vijay N. Age 32 · Dept. Coordinator · Administration "We gave teachers laptops and Zoom accounts and said 'now you can do hybrid.' But we never redesigned how classrooms work, how schedules are made, or how students register for modes." 💡 Institutional change is needed, not just individual adaptation

SOFTWARE EMPLOYEE

1. Nagraj Potturu Age : 41 Software Employee.Infosys

"When I work from home, I can focus better and avoid commuting. But when I need to brainstorm or solve complex problems, being in the office with my team is much more effective. That's why I feel hybrid work gives me the best productivity."

2 .Shruti Reddy Age : 28 Software Employee.Wipro

"Honestly, I get a lot more done when I'm working from home. If I'm coding, I can put on my headphones and focus for hours without someone stopping by my

desk every few minutes. The office is great for team discussions, but for actual development work, I usually feel more productive remotely."

PROFESSORS

2) Dr. Seenivasan Horticulture prof

"You're not dealing with little windows on a screen. You're dealing with people. Being physically present creates more connection, empathy, and learning. Offline spaces challenge you to interact with others, learn from different perspectives, and grow beyond academics."

3) Avinash Arun Chauhan

"Students can watch videos of equipment, but they can't feel, operate, or experience it the way they do in a real classroom. We made sure no student was left behind, but reaching students in remote locations required constant adaptation and effort."

STUDENTS

1) Kriti Maurya

"Online learning wasn't a very good experience because I couldn't concentrate and used to get distracted. Since it was online, I could just turn off my video and look at YouTube or whatever. I prefer a hybrid system where it's a balance between both modes."

2) Olivia Joan

"Online classes were very distracting. We would play games, watch videos, or sleep during lectures. It was hard to stay focused. I prefer offline learning much better because it provides actual class interactivity with the professor and your classmates."

Replace the current "How Might We" section with an interactive dark-themed HTML dashboard showcasing our ideation process.

Display our idea evaluation matrix with filters, color-coded feasibility/desirability/viability badges, KPI summary cards, and a highlighted "Selected Concepts" section.

Present the flow as:

User Insights → HMW Questions → Generated Ideas → Evaluated Concepts → Final Solutions.

Maintain the existing dark theme, glassmorphism effects, and modern dashboard styling.

Change this

to these

1. Unified Platforms & Workspaces

Reducing communication fragmentation and cognitive overload by creating a centralized **digital ecosystem**.

Student

Teacher

Software Employee

Hybrid

Online

⚠ Problem Being Solved

Students, teachers, and employees frequently switch between multiple communication and workflow platforms such as WhatsApp, email, LMS portals, Zoom, Slack, Teams, and shared drives. This fragmentation causes **missed updates**, **duplicate work**, confusion, notification fatigue, and **mental overload**.

⚙ Realistic Implementation

PHASE 1 — Platform Audit

- Identify all currently used tools
- Map where announcements, files, recordings, meetings, and submissions happen
- Detect duplicate communication channels

PHASE 2 — Select a Single Source of Truth

Institutions and companies choose one mandatory primary platform. Examples:

- Google Classroom
- Moodle
- Microsoft Teams
- Slack
- Notion

PHASE 3 — Gradual Migration

- Week 1 → announcements migrate
- Week 2 → learning materials migrate
- Week 3 → recordings/tasks migrate
- Week 4 → redundant platforms removed

📅 Daily Routine Integration

Students & Employees:

- Check one dashboard every morning
- Store all files in standardized folders
- Use one notification system

Teachers & Managers:

- Upload materials within fixed deadlines
- Use standardized announcement templates
- Avoid duplicate posting across apps

🔥 Methods Integrated Into Daily Life

- Morning dashboard check ritual
- Weekly workspace cleanup
- Standardized file naming systems
- Shared folder structures organized by project/topic/date
- Single-click access dashboards

📊 Expected Impact

- Reduced missed deadlines
- Lower cognitive overload
- Faster onboarding
- Reduced communication confusion
- Better information accessibility

Before

- Multiple disjointed apps
- Missed deadlines & updates
- Constant scattered notifications

After

- One unified dashboard
- Structured, predictable workflow
- Reduced mental overload

2. Calendars & Roadmaps

Creating workload transparency and reducing deadline collisions through synchronized planning systems.

Student

Teacher

Software Employee

Offline

Hybrid

⚠ Problem Being Solved

Students and employees often experience overlapping deadlines, sudden schedule changes, unclear semester plans, and unpredictable workloads. This creates stress, burnout, poor time management, and reduced productivity.

⚙ Realistic Implementation

PHASE 1 — Shared Calendar Infrastructure

- Deploy centralized calendar systems accessible to all personas
- Integrate exams, assignments, meetings, project deadlines, and events

PHASE 2 — Workload Visibility Rules

- Teachers/managers must check shared calendars before assigning major work
- Prevent deadline clustering during high-stress periods

PHASE 3 — Roadmap Standardization

- Publish semester/course/project roadmaps at the start of each cycle
- Include milestones, deliverables, revision weeks, and buffer periods

📅 Daily Routine Integration

Students:

- Weekly Sunday planning sessions
- Daily deadline review habit

Teachers:

- Upload schedules and assessments early
- Avoid sudden task additions

Employees:

- Begin workdays by checking shared sprint/task calendars
- Use workload indicators before accepting meetings

🔧 Methods Integrated Into Daily Life

- Color-coded calendar systems
- Automated reminders
- Weekly review rituals
- Shared visibility dashboards
- Buffer-week planning systems

📊 Expected Impact

- Reduced scheduling conflicts
- Better time management
- Lower stress during peak workload periods
- Increased predictability
- Improved productivity

Before

- Unexpected deadline pile-ups
- Hidden workload across teams/classes
- Constant reactive firefighting

After

- Predictable timeline mapping
- Proactive workload balancing
- Calm, structured prioritization

3. Health, Breaks & Boundaries

Reducing burnout, screen fatigue, and mental exhaustion through structured recovery systems and healthier scheduling practices.

Student

Software Employee

Online

Offline

Hybrid

▲ Problem Being Solved

Continuous meetings, long classes, excessive screen exposure, and after-hours communication contribute to burnout, eye strain, fatigue, reduced concentration, and poor work-life balance.

⚙ Realistic Implementation

PHASE 1 — System-Enforced Break Buffers

- Configure meetings/classes to automatically end 5–10 minutes early
- Prevent back-to-back scheduling

PHASE 2 — Notification Boundaries

- Silence non-critical notifications outside work/study hours
- Introduce 'Right to Disconnect' policies

PHASE 3 — Wellness Integration

- Add scheduled movement/stretch reminders
- Introduce no-meeting lunch periods
- Create designated focus hours

📅 Daily Routine Integration

Students:

- Stretch/walk between classes
- Follow Pomodoro-style study sessions
- Use scheduled offline breaks

Teachers:

- Include transition periods between lectures
- Reduce unnecessary meetings

Employees:

- Maintain protected focus blocks
- Avoid responding to non-urgent messages after work hours

✂ Methods Integrated Into Daily Life

- Auto-ending meetings at 50 minutes
- Eye strain reminders
- Movement prompts
- Scheduled digital detox periods
- Focus mode integrations

📊 Expected Impact

- Reduced burnout
- Better concentration
- Improved work-life balance
- Healthier screen-time habits
- Increased long-term productivity

Before

- Back-to-back endless meetings
- Severe burnout and screen fatigue
- Unhealthy after-hours work pressure

After

- Built-in automated recovery buffers
- Sustained daily energy & focus
- Strictly protected personal boundaries
